### **Guidelines for Ants Interior Bait Treatment**

The premises or area to be treated must be ready on time for the bait treatment as per the agreed appointment or arrangement. Delays may disrupt the technician's working schedule, and this may lead to a reschedule and/or an extra charge.

**WARNING: BAITS MAY CONTAINS THE ALLERGENS PEANUT AND SOY. DO NOT ALLOW CHILDREN OR PETS TO PLAY WITH THE BAITS.**

You may be at the premises during the bait treatment, however, please be mindful that the technicians are following a working schedule and even though they may be able to answer some questions, they cannot engage in long explanations or conversations. If you have further questions please contact your landlord or the pest control company office.

The duration of the bait treatment varies depending on the size of the premises and some other factors, however, we recommend being prepared for a 30 to 60 minutes treatment.

Preparing your premises as follows, will enable the technicians to provide the most effective treatment:

#### General Guidelines

- ☐ Keep your dog leashed, and any pet away and contained while the technicians are in the premises
- ☐ If you won't be at the premises during the treatment, please leave a note describing where you have seen ants
- ☐ Within reason, clear goods off the area to be treated (i.e. children and pet toys and/or objects that may interfere with the application of the baits). Items removed may be returned to their original place once the bait application has been completed

#### Guidelines for the Kitchen and Washroom

- ☐ Remove all items on top of the fridge if they are blocking the access to a cupboard or shelf Kitchen and/or washroom
- ☐ Clean the kitchen and bathroom(s): cabinets, shelves, floor, and under stove and fridge
- ☐ Move the stove and fridge two feet away from the wall
- ☐ Within reason clear goods off the kitchen and washroom floors

#### Important Note

- Multiple bait treatments may be required for achieving a desired ants control when a high infestation is present and/or when the area to be treated has conditions that may interfere with an ideal treatment, for example, concrete slabs or structures blocking infested spaces.
- If ant activity is still seen 2 weeks after a baiting treatment, another session is recommended.
