### Post Cockroach Bait Treatment Guidelines

#### Immediate actions:

- ☐ Do not use strong cleaners on or near cockroach baits
- ☐ Do not remove or disturb the cockroach baits
- ☐ Items removed can be returned to their normal place

#### Preventive actions to avoid infestation recurrence:

- ☐ Wash and dry dishes after each meal
- ☐ Keep the floor and all counter and stove tops clear of food particles
- ☐ Store all open foods in containers with tight lids
- ☐ Take garbage bags out daily
- ☐ Reduce clutter in your home
- ☐ Do not keep any recycle items (bottles, cans, etc.) unless they are well washed
- ☐ Do not store paper bags in the kitchen and bathroom
- ☐ Do not spray any insecticide unless done by a pesticide professional
- ☐ Be mindful that cockroaches may be introduced into your premises when bringing bags and cardboard inside

It is highly recommended to use cockroach “traps” in order to monitor the progress of a treatment. Two weeks after a treatment was done, some cockroach monitors/traps should be placed and checked daily for one week. Then weekly for 3 more weeks. If no cockroaches are trapped then no need for further pesticide treatment. However, a preventive measure is to place cockroach traps every 2 - 3 months after a treatment, particularly in buildings with history of cockroach infestations. If you are interested in using cockroach monitors/traps you can ask Savvy Pest Control Ltd.

Complete cockroach control may take from few weeks up to a couple of months, depending on the size of the pest population and the household diligence with good sanitation practices
